

EPA Science Forum 2006:

Your Health, Your Environment, Your Future

May 16, 2006 through May 18, 2006

Ronald Reagan Building and International Trade Center
Washington, DC

The Forum will highlight the relationship between our environment and public health, and will include discussions on issues as diverse as the impact of understanding the human genome and the impacts of the built environment. The forum will also highlight the complementary roles of EPA and other Federal public health agencies.

Begun in May of 2002 as a demonstration of EPA's commitment to quality science, the Science Forum has rapidly grown into an EPA tradition.

The Science Forum allows scientists, staff members, researchers, communicators, and stakeholders to share ideas, demonstrate their latest research, and explore opportunities to collaborate.

Plenary sessions, poster platform sessions, poster presentations, and a number of exhibits will explore this year's three tracks:

- Disease Susceptibility and the Environment
- Global Challenges
- The Built Environment
